

Arraya SMB Protection Package

Large enterprises can afford to build fully-staffed internal security teams to monitor today's emerging security threats. Of course, cyber security concerns aren't limited only to large enterprises. Yet, smaller organizations often lack the resources, time, or personnel to take on that task. Arraya's SMB Protection Package is built specifically for customers in need of practical, simple security solutions that are also cost effective.

Best in Class Protection

You don't have to bring in \$10B a year to get best in class protection. Whether you are worried about ransomware, protecting health records, securing financial data, or safeguarding personally identifiable information, the SMB Protection Package provides the baseline security functionality all organizations need to implement. We leverage best in class solutions for the following capabilities:

- ◆ Endpoint Protection
- ◆ Multifactor Authentication
- ◆ Email Security
- ◆ Web Security
- ◆ Training and Awareness

These solutions protect at the user level and scale as your business grows, while still providing state of the art technology like global threat intelligence, advanced sandboxing, real-time malware blocking, continuous file analysis, and rapid detection, containment, eradication and recovery.

CLOUD BASED, FULLY MANAGED SOLUTIONS

Organizations in the SMB market don't always have data centers large enough to handle the new servers or appliances required for top notch security solutions. Arraya's offering utilizes cloud subscription services that don't require any on-premises backend infrastructure to manage. These solutions are managed via the Internet and can be quickly on boarded for immediate protections without large implementation plans. Furthermore, all of the reporting is baked into the cloud application, so you can get critical reporting information without having to configure databases or other analytics servers.

For customers that want a fully managed solution, Arraya Managed Services can completely operate and support these applications at a much lower cost than having to bring in additional full time employees. Arraya's stable of top notch engineers can be leveraged in the same way as internal resources for full end to end security lifecycle solutions management.

COMPLIANCE TESTED, AUDITOR APPROVED

In the wake of the continuous stream of publicly released security breaches, regulatory and compliance checklists are becoming more and more complex. These audits no longer apply just to large enterprise companies. Arraya's Small & Mid-Sized Business Protection Package provides capabilities that not only help organizations comply with these requirements, but also simplify the compliance process.

Why Arraya?

Security Advisory Services team with real world experience at the CISO level

Member of CRN's Solution Provider 500, Tech Elite 250, and Managed Services Provider 500 lists year after year

Tailored enterprise solutions that distinguish us from other consultants, who focus solely on selling point hardware and software products

Structured but Nimble — the expertise of a large company with the personal attention and agility our customers have come to depend on
