ARRAYA SOLUTIONS TECH SUMMIT

OCTOBER 19-23

Five days of virtual deep dives into the
industry's hottest topics and technologies

LEARN

ENGAGE

INNOVATE

ELEVATE

BY TECHS. FOR TECHS.

Arraya Solutions' technical engineers are passionate about the solutions they design, implement and support. Arraya's Technology Summit provides attendees with the unique opportunity to learn about new and innovative technology from these experts who deploy IT solutions for companies and organizations throughout the region.

This year due to COVID-19, the 6th annual Tech Summit is going virtual. Although we are disappointed to not see everyone in person, you can still look forward to the compelling technical content our attendees have come to expect from this popular event.

REGISTER NOW: [Arraya.info/TechSummit](https://arraya.info/TechSummit)

Our techs have logged countless hours supporting customers across a number of industries and verticals. They are driven to keep their skills fresh and are always on top of the emerging technologies that have the potential to transform the industry. Through a series of virtual sessions spanning the week of October 19th, our technical leaders will share their experiences, answer questions and highlight new and innovative technology.

Who Attends?

This virtual event is geared towards IT team members who want to sharpen their skills and learn from their peers.

Added Value.

Don't miss this chance to learn from the pros, improve your skills and add value to your IT organization.

Opportunity.

Expect sessions filled with technical discussion - giving you knowledge and insight you won't get anywhere else.

The 2020 Virtual Tech Summit will feature sessions on:

- Hybrid Cloud
- Software-Defined Data Center
- Automated Cloud Infrastructure
- Wireless Networking
- Microsoft 365 Security & Governance
- Windows 10
- Azure Policies, Governance & Blueprints
- Virtual Desktop Infrastructure
- Kubernetes
- Cyber Security
- SIEM Program Development
- Cloud Collaboration
- Application Development for Healthcare

AGENDA & SESSION DETAILS

Monday, October 19th

10:45 AM - 12:00 PM

Staying on Track with Microsoft Azure Policies, Governance and Blueprints

Cloud journeys can go sideways quickly without a proper set of guardrails in place to keep them on track and moving ahead. Azure Policies, Governance and Blueprints can serve as those guardrails. Our presenter will detail the tools and tactics that attendees can use in order to increase the security, cost efficiency, and ease of management of their organization's Azure environment.

1:00 PM - 2:00 PM

Enable Your Mobile Workforce with Cisco Meraki

Workplaces used to be thought of as somewhere you go. Now? A workplace has become wherever you are. This session will cover how organizations can create the flexible and secure workplace experience today's climate demands using devices such as the Cisco Meraki Z-Series teleworker gateway and the Cisco Meraki MX series. Our experts will break down how these devices can be leveraged as the central hub of a dependable and safe remote workforce.

Tuesday, October 20th

9:30 AM - 10:30 AM

Striking the Balance Between User Productivity and Data Security with Microsoft 365

Microsoft 365 bills itself as "your productivity cloud" – an all-in-one platform that connects users with best of breed efficiency-oriented solutions. Of course, those productivity gains can't come at the expense of protecting users and data from cyber criminals. Attendees can expect to learn from this session how to use the tools built in to Microsoft 365 to achieve both their organization's efficiency and security goals.

11:00 AM - 12:00 PM

Leveraging ACI to Unify Your Cloud and On-Prem Environments

Today's organizations often have one foot on premises and the other in the cloud. For admins tasked with maintaining and securing these hybrid environments, this arrangement can prove challenging. This session will demonstrate how ACI can create a single pane of glass and management center that stretches across Azure, AWS and even on-prem environments.

1:00 PM - 2:00 PM

Simplifying VDI (and Lowering TCO) with Windows Virtual Desktop

Taking advantage of the benefits of virtual desktop infrastructure (VDI) used to require the support of third party solutions outside the Microsoft ecosystem. This is no longer the case thanks to Windows Virtual Desktop. Attendees will see what makes this solution tick and how it can simplify licensing and cost, reduce infrastructure management, and empower IT pros to focus on what matters most to their organizations.

Wednesday, October 21st

11:00 AM - 12:00 PM

Simplifying Windows 10 Updates with Autopilot, SCCM, and Co-Management

The gap between Windows versions used to be measured in years. With Windows 10, it can be a matter of months. The risk is great for those unable to keep up with the latest version. During this session, the presenter will demonstrate how to use tools like Autopilot, SCCM and Co-Management to keep up with the quicker pace of Windows 10 updates and maintain organizational security.

1:00 PM - 2:00 PM

Charting Your Cyber Security Program's Path to Maturity

Organizations work hard at cyber security. However, the question remains: Are those efforts truly making them safer? Or, are they spinning their wheels? This session will help attendees effectively gauge the maturity level of their organization's cyber security program. These insights will empower them to establish a baseline they can use to evaluate future initiatives, technologies and in general chart a more meaningful path forward.

Thursday, October 22nd

9:30 AM - 10:30 AM

Peeling Back the Layers of VMware Cloud Foundation on Dell EMC VxRail

Today's data centers are complex and they are only going to trend further in that direction in the years to come. During this session, attendees will be introduced to the various tools and platforms that make up VMware Cloud Foundation. Additionally, they will learn how to leverage these bundled solutions to drive greater efficiency within their enterprise architecture, including through lifecycle automation.

11:00 AM - 12:00 PM

Accelerating Service Delivery and Improving Patient Outcomes with Boomi

Healthcare today is a complex web of data transfers as information travels between providers, offices, the private and public sector, and back. Even as high traffic continues to define the industry moving forward, one aspect could – and should – change: the complexity. This session will provide an insider's perspective on how healthcare organizations can leverage Boomi to simplify and centralize data management and movement.

1:00 PM - 2:00 PM

How Not to Manage a SIEM – and What to Do Instead

SIEM – Those four little letters can have an outsized impact on organizational security. However, often equal in scope is the workload facing those tasked with combing through and responding to the logs generated by these tools. This session will present attendees of all SIEM experience levels with field-tested operational and strategic best practices they can use to get the most from their solution.

Friday, October 23rd

11:00 AM - 12:00 PM

Why Kubernetes Might Be the Next Step in Your Application's Cloud Journey

Once an application has been moved to the cloud, the question becomes: What next? For many, the answer comes in the form of Kubernetes clusters and containers. During this session, the presenter will explore the motives driving this trend, including scalability as well as application portability. Attendees will also learn what it could take to introduce and manage Kubernetes in their application environment.

1:00 PM - 2:00 PM

Cisco Collaboration in the Cloud: Where to Start and How to Succeed

Now, more than ever, collaboration lives in the cloud. Organizations everywhere have come to depend on the cloud for secure and reliable calling, chat, meetings, and more. During this session, our presenter will demonstrate the options available to organizations looking to pursue or further a cloud journey built on industry-leading solutions from Cisco. Attendees will also learn about migration strategies, deployment options and possible integrations with other applications.

Post-Event VIP Virtual Networking Reception

City Brew Tours Beer & Food Pairing

Thursday, November 12th, 3:30 PM - 5:00 PM

A limited number of Tech Summit attendees will gain access to a post-event VIP reception on Thursday, November 12th.

Pairing beer and cheese is a science and an art. Our expert guides will help attendees explore the intricacies of pairing beer, cheese and some sweet treats. Attendees will receive a special gift box the week of the reception and can enjoy the event from the comfort of their home.

For your chance at a VIP invite:

- Register early - the earliest registrants will qualify first
- Attend the Tech Summit sessions - registrants must attend sessions to qualify for a reception invite
